

Gas springs, Dampers and Adjustment systems

[Product catalog](#)

SUSPA – Your strong industrial partner

For more than 60 years, SUSPA products have been present in your daily life - at home in furniture, refrigerators and washing machines, in means of transport like buses, trains and planes, in modern office furniture, in leisure and fitness equipment, but also in hospitals and rehab centers.

Although you may not be able to see our products, we are always there – increasing the comfort and safety level for all of you.

Major players in the automobile, office furniture, industrial, transportation, appliance, health care, leisure, and gaming industries depend on SUSPA as a developmental and systems solution partner. Our engineers and technical sales team will work seamlessly with your staff on a wide variety of projects, committed to providing the most effective solution for your organization.

Reliability as the highest standard

Requirements on quality are increasing in the automotive industry as well as in other industry sectors. SUSPA certifications according to IATF 16949 have therefore been an integral part.

Effective quality management from purchasing to production and sales and on to final application secures the worldwide great reputation and reliability of SUSPA products.

Gas springs

Gas spring Liftline (standard program)

Liftline is an excellent gas spring program offered by SUSPA. Successfully proven in the market for decades and always state-of-the-art through constant innovation.

The SUSPA Liftline program includes five basic types: the types 16-12, 16-1, 16-2, 16-4 and 16-6.

The main differences are in the tube and piston rod diameters and the different extension forces. This way, we can meet your specific technical requirements with the optimal gas spring type.

Type	Ø Tube (mm)	Ø Piston rod (mm)	Stroke max. (mm)	Extension force F_1 (N)
16-12*	12	4	150	40 - 180
16-1*	15	6	150	50 - 420
16-2*	18.5	8	250	80 - 750
16-3	22	8	495	100 - 1,200
16-4*	22	10	495	100 - 1,200
16-6*	28	14	500	200 - 2,490

* Standard program, pages 9-13

Gas spring Liftline

Design and functionality

How force and effective cushioning are produced

Gas springs are hydropneumatic adjustment elements. They consist of a pressure tube plus piston rod with piston unit. Connecting elements on the pressure tube and the piston rod allow appropriate connection to your application.

At the core of the SUSPA gas spring is the special seal and guide system. This ensures hermetic sealing of the cavity with low friction, even under extreme environmental conditions.

The gas spring is filled with non-toxic nitrogen at high pressures. This produces a charging pressure that in turn exerts an effect on the cross section of the piston rod, generating the extension force. If the extension force of the gas spring is greater than the force of the counterbalance, the piston rod extends; if the extension force is smaller, it retracts. The speed of the extension is determined by the flow cross section in the damping system.

In addition to nitrogen, the cavity contains a defined quantity of oil for lubrication and end position cushioning. The cushioning effect of a gas spring can be determined depending on the requirements and the task involved.

Spring characteristic

As seen in the graphic, the spring characteristic curve shows the force path of the gas spring over the stroke, from the extended to the retracted state and back. The spring characteristic illustrates the balance of power of F_2/F_1 . For the design of gas springs, the force F_1 is, in addition to the dimensions, the most important criterion.

Gas spring Liftline Type 16-12 (standard program)

Ø tube 12 mm, Ø piston rod 4 mm, max. stroke 150 mm, extension force 40-180 N

Type 16-12 Thread/Thread

Fitting AM4

All dimensions in mm, The standard color of the tube and the piston rod is black.

Fitting BM4

Select length, stroke and extension force

Length L (mm) ±2	Stroke (mm)	Technical data	Extension force F_1
72	20	16-12 - 49 - 23 - AM4 - BM4 -	40 N ≤ F_1 ≤ 180 N
92	30	16-12 - 59 - 33 - AM4 - BM4 -	
112	40	16-12 - 69 - 43 - AM4 - BM4 -	
132	50	16-12 - 79 - 53 - AM4 - BM4 -	
152	60	16-12 - 89 - 63 - AM4 - BM4 -	
192	80	16-12 - 109 - 83 - AM4 - BM4 -	
232	100	16-12 - 129 - 103 - AM4 - BM4 -	
272	120	16-12 - 149 - 123 - AM4 - BM4 -	40 N ≤ F_1 ≤ 120 N
332	150	16-12 - 179 - 153 - AM4 - BM4 -	40 N ≤ F_1 ≤ 90 N

Order example: **16-12** - **179** - **153** - **A446** - **B446** - **120N**
Type Tube (A) Piston rod (B) Tube (A) Piston rod (B) Extension force F_1
Length (mm) Fitting

Liftline Special functions

Standard gas spring or Soft-Stop gas spring

for example for furniture flaps

Standard gas springs as well as Soft-Stop gas springs are dampened on extension. After opening the flap slightly (as little as 10 degrees) both gas spring types will automatically lift the flap to the fully open position of approximately 90 degrees unassisted. In order to minimize vibrations, the speed is controlled over the entire range of opening by using a special hydraulic dampening (extension dampening) thus enabling a smooth opening. By presetting the filling pressure, it is possible to optimize the gas spring to any installation situation.

Advantages

- Extension speed is defined
- Automatic and noiseless opening function
- Smoothly cushioned movement throughout the entire opening procedure
- Gently slowing down the door/lid as it reaches full extension

Positioning gas spring (Friction gas spring)

for example for furniture flaps

If a furniture flap needs to be used in many different positions, the positioning gas spring may be the right solution. This gas spring supports the load in any position desired by the user. Doors/lids can be positioned infinitely throughout their complete range of motion. By careful adjustment of the pressure during filling, the gas spring can be optimized to the application.

Advantages

- Counterbalance for loads during the opening function
- The ability to hold or position the door infinitely at any position in its range of motion

Gas spring with protective cap

If the gas spring is used in a particularly dirty or dusty environment, it may be necessary to protect the seal by using protective caps made of rubber or plastic. The protective cap is intended to ensure that no dirt and dust particles in the environment penetrate into the pneumatic spring seal when actuating the flap. Using the protective cap therefore also has a positive effect on the service life of the gas spring in these installation situations.

In an extremely dirty environment, the protection that is guaranteed by the protective cap may not be sufficient. In these extreme environmental conditions, it is advisable to use a Space-Mat gas spring (gas spring with lubrication reservoir).

Space-mat: gas spring with lubrication reservoir

The gas spring with lubrication reservoir is based on the space-mat principle. This principle means that a plastic foam placed around the piston rod absorbs lubricants into the cavities by capillary action and releases them again purposefully when lubrication is required. The service life of the gas spring is markedly improved as a result, especially if used in technically demanding surroundings (dirt and dust).

Advantages

- Suitable for technically demanding surroundings (dirt and dust)
- Suitable for special installation situations (e.g. piston rod upside)

TouchLift: gas spring that locks in the retracted position

The SUSPA TouchLift is a gas spring that locks itself in the retracted position. In this way, for example, covers can be kept in the lowered position. Slight pressure on the cover releases the lock and the gas spring extends.

The lock works according to the so-called ballpoint pen principle:

- Press once and the gas spring locks in place
- Press once more and the gas spring extends

Applications

By using the SUSPA TouchLift gas spring, furniture elements can be retracted so that their lid cover is flush with the respective surface. The objects can be raised and retracted simply by pressing the cover.

- Retracting flat screens
- Retracting outlet strips
- A minibar to be retracted
- Lifting and lowering functions for head rests or arm rests of sofas

Advantages

The main advantages of the SUSPA TouchLift is the very low noise and the 7 mm travel of release. The TouchLift gas spring works without electricity, therefore, no cables or batteries are required and no electricity costs are incurred. Its service life corresponds with that of a classic gas spring, i. e. approximately 50,000 cycles.

Lockable gas spring Lockline

The locking gas strut aids the ergonomics and comfort for conveniently safely changing seated and lying positions, for effortlessly and precisely operating machine covers and are used in many other applications.

Our lockable gas struts make it possible to variably lock them in any stroke position, whether elastically ("spring-loaded") or rigidly. Our special functions offer particular advantages when it comes to convenience and operation.

Different connection elements and release systems complete our range of products and give you the appropriate lockable gas strut for any application.

Elastic locking

Type	Ø Tube (mm)	Stroke (mm)	Extension force F_i (N)	Type of locking
EL1*	22	10 - 450	80 - 800	elastic
EL2*	28	10 - 450	80 - 1,000	elastic

Rigid locking

HY1*	22	10 - 300	80 - 800	rigid in the tensile direction
HY3*	28	10 - 450	80 - 1,000	rigid in the tensile direction
HY4	28	10 - 300	80 - 1,000	rigid in the compressive direction
HY6	27	150 - 450	70 - 400	rigid in the compressive direction
VOB	28	70 - 300	150 - 1,000	rigid in the compressive direction

* Standard program, pages 23-25

Applications

Machinery lid

Massage couch

Vehicle seat

Side table

Steering column

Relax chair

Lockable gas spring Lockline

Design and functionality

Working principle

Gas springs consist of a gas pressurized tube together with a piston rod and piston. The piston is fitted with a valve that is actuated by the release pin. When the valve is shut, the gas spring does not move, thus providing locking in the desired position.

Depending on the pressure medium, this locking feature can be either **rigid** or **elastic**.

Type of locking

Rigid locking in extension (HY1 and HY3) is used when a cushioning effect in the locking position is not desired – for example, for safety reasons. Rigid locking in compression (HY4 and HY6) is recommended for light weight applications that are subject to high compression forces when locked and require no movement. The VOB18-1 and HY6 are ideal for applications that require a short installation length and a large stroke (detailed information www.suspa.com/rigid-locking).

Elastic-locking gas springs EL1 and EL2 are recommended when the locking feature is required to have a cushioning effect. Sudden jolted loads can thus be dampened or even completely avoided.

Spring characteristic

As the graphic illustration indicates, the spring characteristic curve represents the force curve of the gas spring over the stroke, from the extended to the compressed state. The progression thereby represents the force ratio F_2/F_1 in extension direction. To be able to design a gas spring, force F_1 apart from the dimensions, is an important measuring criterion. Force F_1 is measured 2 mm from the end of the extension movement and defines the value of the spring force. Force $F_{R'}$, resulting from friction, develops between the force lines in the direction of retraction and extension. The extension speed can be defined by adjusting the piston assembly corresponding to available stages.

Standard program – technical specifications

Elastic locking

Specification	EL1	EL2
Release pin	on piston rod side	
Locking	elastic	
In compression direction: max. load [N]	6,500*	10,000*
In extension direction: max. load [N]	3,500*	7,000*
Tube diameter [mm]	22	28
Piston rod diameter [mm]	10	
Stroke C [mm]	20 - 250	20 - 250
Extension forces F_1 [N]	200 - 800	200 - 1,000
Progression ratio (F_2/F_1)	~1.30	~1.20
Release force [N]	$0.25 \times F_1$	
Release travel, normal [mm]	$2.5 \leq x \leq 3.5$	
Recommended installation position	piston rod pointing downwards	
Permissible operating temperature	-20 °C to +60 °C	
Permissible storage temperature	-20 °C to +80 °C	

Rigid locking

Specification	HY1	HY3
Release pin	on piston rod side	
Locking	rigid in tensile direction	
In compression direction: rigid until [N]/max. load [N]	$3.6 \times F_1 / 6,500^*$	$5.8 \times F_1 / 10,000^*$
In extension direction: max. load [N]	3,500*	7,000*
Tube diameter [mm]	22	28
Piston rod diameter [mm]	10	
Stroke C [mm]	20 - 250	20 - 250
Extension forces F_1 [N]	200 - 800	200 - 1,000
Progression ratio (F_2/F_1)	~1.60	~1.40
Release force [N]	$0.25 \times F_1$	
Release travel, normal [mm]	$2.5 \leq x \leq 3.5$	
Recommended installation position	any	any
Permissible operating temperature	-20 °C to +60 °C	
Permissible storage temperature	-20 °C to +80 °C	

* Depending on the length of the piston rod (stroke) and extension force, restrictions may apply.

Lockline Special functions

OverloadProtection OP

Comfortable adjustment in extension direction

The special function OverloadProtection OP for the lockable gas struts HY3 and HY4 is used for the safe adjustment of the application in the extension direction without release. Thus, for example, massage couches, armrests and footrests can be adjusted comfortably and intuitively with one hand.

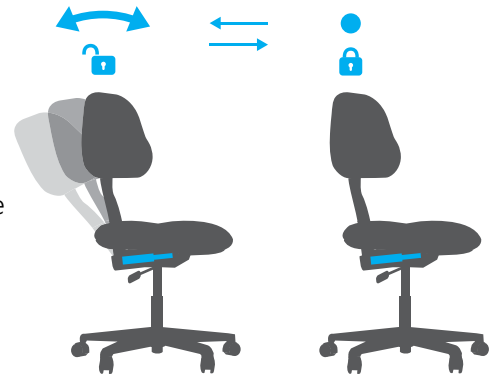

EasySwitch ES

Locking that can be switched on and off

With the "EasySwitch" module, the user controls the valve "digitally", alternating between the closed and permanently open position and back again. You switch between the two modes by activating the pin through the release mechanism.

With EasySwitch, the valve stays either open (swinging function) or closed (locked backrest) as per the user's settings.

OverRide OR

Smooth extension without actuation

The "OverRide" module allows a person to move the application in the extension direction without having to activate the release function. In the case of desk or table applications, a gentle upwards force applied to the tabletop adjusts the height of the table. Once the desired position has been achieved, locking in the compression direction is rigid.

OverRide provides smooth, comfortable operation and was first designed for use in hospital beds and over-bed tables. It also allows for single-hand operation of the application.

TimeReset TR Automatic return

The "TimeReset" automatically detects whether the application is charged with a person's weight or not. When loaded, the lockable gas strut operates in the usual manner and permits locking at any position. When the application is not loaded, the lockable gas strut returns it to the starting position (vertical backrest) within a custom defined time period.

TimeReset is particularly suitable for passenger seats, cinema and theatre seating or conference chairs.

ComfortReleaseLow CL Extremely easy operation of gas struts

Using the "ComfortReleaseLow" module can adjust the lockable gas strut to the requirements of any release system in order to achieve maximum operating comfort. Conventional valve designs (standard release) cannot be conveniently triggered in the event of high extension forces. SUSPA ensures a convenient release through the lowest possible manual force on the actuating element (button, lever). We are happy to advise you in the optimization of your application.

Lightweight lockable gas strut

Lockable gas struts for aviation are ideal for the comfortable and safe adjustment of the sitting and lying position of passenger and pilot seats.

Characteristics

- Optimized weight due to the aluminum piston rod (60% weight savings compared to a conventional piston rod made of steel with the same performance)
- High strength of the tube even with a smaller wall thickness (25% compared to conventional tubes)
- Low release force
- High spring stiffness

Application examples

- Backrest adjustment in passenger and pilot seats
- Leg rest for business and first class seats

Damper Softline

The SUSPA hydraulic dampers, also called shock absorbers, industrial shock absorbers or vibration dampers, are designed for the respective product application so that an optimal movement sequence or optimal vibration behavior is achieved. We use our decades of experience in the field of damping technology to solve your individual requirements for damping vibrations and impacts.

Slot machine

Damper Softline

Design and functionality

When the piston rod is moved, the damping medium of oil is pressed through the bores in the piston system. The damping force results from the resistance of the oil when flowing through the piston system. Due to the internal design of the piston system, the pull and push direction can be set independently of each other. The damping forces are dependent on the piston speed.

When the piston rod is moved, the damping medium of oil is pressed through the bores in the piston system. The damping forces are dependent on the piston speed.

Damping forces

Because the damping holes can be closed respectively to either side by way of valve washers, it is possible to regulate the damping forces in extension and compression directions largely independent of one another. The damping force upon compression determines the hardness of a shock absorber upon retraction. The damping force upon extension regulates the extension speed.

Characteristic curve

Adjustable linear, progressive or degressive characteristic curves allow for the application-oriented design of the hydraulic damper.

Damper Softline Variations

Standard

The classical standard damper with throttling port and valve system for diverse applications. A vacant space remains in the pressure tube for the volume of the piston rod. A slight idle stroke results, meaning that damping force only occurs after several millimeters of path.

Characteristics

- Without extension force F_1
- With idle stroke
- Fixed position

Application examples

Waste container, counter, medical, furniture, automotive interior, overhead compartments

Damper with gas pressure

The vacant space is filled with gas in this version. This damper is therefore usable independent of installation position.

Characteristics

- With extension force F_1
- With idle stroke
- Fixed position

Application examples

Automobile trunks, glove compartments, various flaps

Damper with gas pressure and separator piston

In this version, the oil chamber is separated from the gas compartment, which is under pressure, by a sealing separator piston. The damper can therefore be installed in any position desired and possesses no idle stroke. This has as a consequence that the damping force immediately sets in upon load condition.

Characteristics

- With extension force F_1
- Without idle stroke
- Independent position

Application examples

Waste container, overrun brakes, automotive interior, commercial vehicle seats

Damper Softline Versions

Damper with bottom valve

The oil chamber is separated from the gas compartment by way of a bottom valve in this type of damper. For specific applications: Idle stroke freedom is achieved without extension force.

Characteristics

- Without extension force F_1
- Without idle stroke
- Fixed position (installation with piston rod pointing downward)

Application examples

Counter, automotive interior, motor vibration damper, belt tensioners, commercial vehicle seats

Damper with bottom valve and diaphragm

The diaphragm in the balance chamber, behind the bottom valve, expands upon load (compression) and contracts upon extension. For specific applications: Idle stroke freedom without extension force is achieved for independent choice of installation position.

Characteristics

- Without extension force F_1
- Without idle stroke
- Independent position

Application examples

Overrun brakes, commercial vehicle seats, belt tensioners

Twin-Tube

Two tubes with unlike diameters are arranged concentrically. The inner tube represents the working area. The space between the inner and outer tubes is the balance chamber that takes up the oil pressed out by the retracting piston rod.

Especially worthy of mention are the freely adjustable forces possible in the extension and compression directions. In addition, the extremely light weight of the damper which is achieved by the use of an aluminum outer tube.

Characteristics

- Without extension force F_1
- Without idle stroke
- Fixed position (installation with piston rod pointing upward)
- Adjustable (HD38)

Application examples

Commercial vehicle seats (vertical damping)

Damper for aviation

The lightweight damper is in particular used in stowage compartments and guarantees a gentle downward-opening. The optimized weight is achieved with this damper due to the small design.

Characteristics

- Wide range of the damping force
- Optional manual force support
- Elegant due to the compact design

Application example

Overhead compartments

Piston rods and Tubes

Rotary and translatory moving piston rods, shafts and tubes meet the highest quality standards due to our decades-long expertise. The precisely coordinated production steps of turning, hardening, grinding, surface coating and polishing ensure a high surface quality. Even complex geometries can be manufactured with high accuracy on CNC machines with several axis - economical and established in millions of applications.

	Characteristics
Ø Piston rod	4 - 28 mm
Ø Tube	4 - 70 mm
Length	35 - 700 mm
Roughness	Ra 0.05 µm/Rz 0.5 µm
Material	steel, stainless steel, aluminum
Surface refinement	hard chrome plating, salt bath or gas nitration, DLC, browning, galvanizing, passivating

Applications

Damper

Convertible

Piston rods and tubes

Production Expertise

CNC Turning

With the latest multi-axis CNC turning machines, we offer you conventional cam-controlled, simple turning as well as the economical complete machining of turned parts in one clamping.

Hardening

Inductive through-hardening ensures the hardening of predetermined zones in the component. It is a technology that can be customized to your needs.

Centerless through-feed grinding

SUSPA grinding lines ensure high throughput speeds and optimal economic efficiency. You can expect an optimal surface quality with roughness values up to Ra 0.1 μm , depending on the material and diameter requirement.

Surfaces

Hard chrome plating, salt bath nitriding, gas nitriding, DLC, black finishing, zinc plating, passivation achieve high corrosion resistance and wear resistance. This means extremely large load changes over the entire service life for your products.

Polishing

The prerequisite of a tribological system is a flawless surface, which we achieve through a final optimized finishing, without a significant removal of material.

Flexibility

A provision of our components adapted to your logistics requirements in the batch sizes you need is a matter of course.

Height Adjustment

Height adjustment Office

Ergonomics in the workplace

Over the last few years, SUSPA has become established as one of the leading suppliers of electric height adjustment systems. The topic of ergonomics in the workplace has increasingly gained importance in companies in recent years.

The best way of countering the lack of movement in the office is to use sit-stand desks.

ELS3 Electric lifting columns at a glance

With the electrical lifting column ELS3 from SUSPA you can easily change your working position from sit to stand. The main features of the lifting columns are elegant design, quiet movement (<48dB) and a long adjustment range. All ELS systems have the option to have collision detection, which will stop the system automatically if an obstruction is detected.

Electrically adjustable table base frames

for duo workplaces

For team-workplaces we offer a complete table base frame suitable for table tops from 1,200 to 2,000 mm. With the so called bench solution you will achieve the ideal use of space in your office.

Model name		Table base frame Bench			
Color		● silver-gray RAL 9006	○ white RAL 9003	● black RAL 9005	● graphite similar to RAL 7024
Cross beam	length	see VariFrame or FixFrame, pages 46 and 47			
Desk top dimensions	length depth	1,200 mm, 1,400 mm, 1,600 mm, 1,800 mm, 2,000 mm 700 - 800 mm			
Material		steel profile			
Fixing plate	length	545 mm			
Accessories		screws, expander plugs with adjustable sliding feet			
For lifting columns		for all square lifting columns BTM (Big Tube Down)			

for corner desks

Our 3-leg-table frame offers a very big work place for corner desks.

Model name		Table base frame corner desk			
Color		<input type="radio"/> silver-gray RAL 9006	<input type="radio"/> white RAL 9003	<input type="radio"/> black RAL 9005	<input type="radio"/> graphite similar to RAL 7024
Cross beam	length	fixed cross beam: 1,140 mm, 1,340 mm, 1,540 mm, 1,740 mm, 1,940 mm adjustable cross beam: 1,140 mm - 1,940 mm			
Desk top dimension		see pictogram above			
Material		steel profile			
Fixing plate (3 pieces)	length	545 mm			
Adjustment range (stroke) until top of frame		ELS3-500S: 680 - 1,180 mm ELS3-650: 600 - 1,250 mm			
Maximum load table frame		150 kg			
Adjustment speed		ELS3-500S: 35 mm/s ELS3-650: 38 mm/s			
Accessories		screws, adjustable feet			
For lifting columns		can be combined with all SUSPA columns			
Foot base	length depth height	1x750 mm und 2x550 mm 90 mm 30 mm			

Accessories and switches

Accessories

The highly efficient control boxes have a flat and compact design. In combination with the switches they guarantee a reliable and economical operation of the tables.

SMART controller

- low standby power consumption: $\leq 0,3$ W
- Soft-Start and Soft-Stop
- overload protection
- small size and flat design
- weight: 305 g
- dimensions: 186x100x30 mm
- controls for EU- and US-voltage available
- supply voltage
EU: 207-253V / 50-60Hz, US: 90-127V / 50-60Hz
- nominal voltage
EU: 230V / 50Hz, US: 120V / 60Hz
- output voltage: 216 VA (2-leg) 24 V DC
- operating time 10 % at maximum load (1 min / 9 min)

COMPACT controller

- low standby power consumption: $\leq 0,3$ W
- Soft-Start and Soft-Stop
- overload protection
- weight: 418 g / 523 g (3-leg-controller)
- dimensions: 264x103x37 mm
- controls for EU- and US-voltage available
- supply voltage
EU: 207-254,4V / 50Hz, US: 90-127V / 50-60Hz
- nominal voltage: 230 V / 50 Hz, US: 120V / 60Hz
- output voltage: 288 VA (2-leg) 24 V DC / 360 VA (3-leg) 24 V DC
- operating time: 10 % at maximum load (1 min / 9 min)
- external sensor collision detector possible with LOGIC-CONNECTOR

Communication and Connectivity LOGIClink

LOGIClink provides connectivity and control, allowing for communication and customization of the user's work environment.

Power cable

available for the control boxes COMPACT and SMART for different countries

Switches

We provide solutions for an installation below the table and within the table top. From a simple hand switch with Up/Down function to a comfort switch with four memory functions and display – all operational elements convince through their surface design and the pleasing haptics.

VariBase

Height-adjustable table column (square column)

The pneumatic height adjustable system VariBase is a professional and extremely robust holistic solution for table applications. It is particularly characterized by ease of handling and Plug & Play installation. VariBase stands out for its application with a long service life and offers comfortable height adjustment.

VariBase is available in the version Big Tube Up (BTU).

Characteristics	Technical data		
Dimension BTU (Big Tube Up)	□ 70/□ 65 mm		
Dimension BTD (Big Tube Down)	□ 60/□ 65 mm		
Length when extended (L_{out})	1,040 mm	815 mm	655 mm
Stroke	400 mm	290 mm	215 mm
Length when compressed (L_{in})	640 mm	525 mm	440 mm
Surface finishing	Powder coated (RAL9006), further RAL-colors on request		
Stroke force	120 N, recommended weight of table top ~ 6 kg, further F_1 -force on request (70 - 400 N)		
Activation/ release	Lever, cable release		
Tabletop fitting	Flange adapter (with 12 drillholes, distance 32 mm, Ø 6.5 mm)		
Base fitting	Flange with 4 x M6		
Non-rotation function	Standard		

Big Tube Up (BTU)

All dimensions in mm.

Features

- Elegant design with square tubes
- Available in versions BTU - Big Tube Up and BTD - Big Tube Down
- Robust guide system
- Available in two versions of gas springs (rigid and elastic locking)
- Non-rotational column
- Quick and easy to adjust
- Plug & Play assembly

Applications

- Side table
- Speaker's desk
- Trolleys, carts
- Overbed tables

VariStand

Height-adjustable table column (round column)

The VariStand table column is a professional, sophisticated, design-orientated solution for all table and cart applications. It is characterized by its ease of use and plug & play assembly.

VariStand is available in version Big Tube Up (BTU).

Characteristics	Technical data			
Order number	13652065	13652067	13652064	13652066
Dimension BTU (Big Tube Up)	Ø 75 mm / Ø 70 mm			
Length when extended (L_{out})	1,040 mm	660 mm	1,040 mm	660 mm
Stroke	415 mm	225 mm	415 mm	225 mm
Length when compressed (L_{in})	625 mm	435 mm	625 mm	435 mm
Surface finishing	Chromium plated		Powder coated (RAL 9006), further colors on request	
Stroke force	120 N			
Activation/release	Cable release (lever on request)			
Tabletop fitting	Flange adapter (with 12 drillholes, distance 32 mm)			
Base fitting	Flange or cone with 3 x M6			
Non-rotation function	Standard			

Big Tube Up (BTU)

All dimensions in mm.

Features

- Elegant design with round tubes
- Precise and silent guide system
- Rigid and elastic locking in any position
- Constant remaining adjustment force in any position
- Optimal anti-twist protection
- Large adjustment range with small installation length
- Quick and easy adjustability
- Easy installation due to plug & play
- Override function: lifting without release actuation (optional)

Applications

- Side table
- Speaker's desk
- Trolleys, carts
- Overbed tables

Height Adjustment Industry

Ergonomics at the workplace

Adjust industrial facilities, workbenches, conveyor belts and all types of industrial worktables flexibly to the requirements of your employees and production - and not vice versa. SUSPA height adjustments support you efficiently and individually.

Type	Characteristics	Drive
Movotec SMS Bolt-On	<ul style="list-style-type: none"> • As an upgrade system for existing workplaces • Load performance 150 kg/lift element • Adjustable range up to 400 mm 	electric

Movotec SMS and ELS3 HeavyDuty Accessories

ELS3 HeavyDuty Subframe

We offer a complete table subframe made of steel profile (silver-gray color RAL 9006) for two or four ELS3 HeavyDuty lifting columns, with screws and adjustable bases (for the lifting column specification, see the table on page 57). The table subframe is suitable for table tops with the dimension 1,600x800 mm, 1,800x800 mm or 2,000x800 mm.

All dimensions in mm.

2-leg HeavyDuty subframe		
Table frame length	Order number	Description
1,600 mm	15311964	EAT3-HD-1600-002-01-S
1,800 mm	15311965	EAT3-HD-1800-002-01-S
2,000 mm	15311966	EAT3-HD-2000-002-01-S

4-leg HeavyDuty subframe		
Table frame length	Order number	Description
1,600 mm	15311967	EAT3-HD-1600-004-01-S
1,800 mm	15311968	EAT3-HD-1800-004-01-S
2,000 mm	15311969	EAT3-HD-2000-004-01-S

 Please find the assembly instruction online at www.suspa.com/global/downloads/

Control box and link cable for ELS3 HeavyDuty and Movotec SMS

Control box SCT4

- Input voltage: 230V/50Hz
- Output rating: 340VA (28VDC at 10% switch-on duration)
- Four actuator outlets per control, extendable to eight actuators with link cable
- Load-independent actuator synchronization
- Switch-on duration 10% (2 min operation/18 min pause)
- Standby use: < 4W (on request < 0.4W)
- Soft-Start and Soft-Stop
- Travel monitoring to protect the system
- Weight (typical): approx. 3.2 kg (toroidal transformer)
- Dimensions: 257 x 120 x 60 mm
- Protection class II (protective insulation)

Link cable

Order no. 19810134

- Connection of two controllers (for 6- or 8-actuator-systems)
- 4 m cable length

Hand switches for ELS3 HeavyDuty and Movotec SMS

- for installation below the table (cable length: 2 m)

Hand switch Up-Down
UBM F02-p

Order no. 09810087

Hand switch memory
UBS/6-s-LCD

Order no. 09810088

Creform®
Bracket Adaptor Set

Order no. 07911027*

- Mounting fasteners can be used if the threaded holes of the SMS CB actuators are not at an optimal place for the application
- One bracket set order for each SMS actuator used

* for easy fastening of
Creform® connectors
(connectors not included)

Movotec Lift Systems

The hydraulic adjustment system for heavy loads

Height adjustment for retrofit

The Bolt-On system is delivered as a kit for retrofitting. Using the retrofit system, you can retrofit your work table that previously could not be adjusted in height with just a few steps, thus making it a height-adjustable workplace. The system includes four to eight Bolt-On cylinders and a pump with hand crank or electric motor.

Movotec Bolt-On Systems

System with hand crank

System with electric motor

max. load (kg)	Adjusting range/stroke* (mm)			
340	150	200	300	400
454	150	200	300	400
590	150	230	300	393

* The adjusting range of systems with electric motor is 6-8mm less.

The system includes

- Crank or motor driven system (incl. control box and switches)
- 1 to 4 Bolt-On lift cylinders
- Hydraulic flexible tubing in individual lengths
- Glides for each lift cylinder
- Drilling templates, tubing clips and cable ties
- Installation and operating instructions

Movotec "Bolt-On" lift systems are readily available, shipped completely assembled and ready for installation.

Movotec Bolt-On Dual Drive Systems for 6 to 8 cylinders

Synchronized 8-leg-system with electric motor

max. load (kg)	Adjusting range / stroke* (mm)				Number of cylinders
680	150	200	300	400	6
907	150	200	300	400	8

* The adjusting range of systems with electric motor is 6-8mm less.

The system includes

- Two synchronized motor driven systems with controllers and switch
- 5 to 8 Bolt-On lift cylinders
- Hydraulic flexible tubing in individual lengths
- Glides for each lift cylinder
- Drilling templates, tubing clips and cable ties
- Installation and operating instructions

Movotec Dual Drive Lift Systems are shipped assembled and ready for installation.
